~~Dear Mr. & Mrs. Wilbert and Ms. Knoblock:~~

Recently you graciously provided a Renewable Energy Kit for one of our 2nd grade teachers, Mrs. Nancy Huyck. Please allow me this opportunity to thank you on behalf of Mrs. Huyck, and the teachers and children at Bowie who will benefit from learning about renewable energy through the use of this teaching kit. I appreciate so much your support of Mrs. Huyck and the Bowie Bobcats.

West Texas is "blooming" with wind energy farms and the Abilene area is a prime location for harnessing winds and turning them into energy. Our children and their parents have only to drive to the edge of Abilene to see one of the largest wind energy projects around. They are very curious about the windmills. Many of their parents are employed in the renewable energy business.

We are eager to provide information on wind, water and solar energy for the children as we know that "going green" is a movement gaining support. By the time our children are adults, we know that energy will be much more efficient than it is now. The children's natural curiosity and their ability to search the World Wide Web for information to answer their questions has provided us a natural pathway to focus on clean energy issues. Having the renewable energy kit will help tremendously to demonstrate concepts that heretofore, we have only been able to view on streaming videos, etc.

Thank you very much for providing this kit to Mrs. Huyck and our school. Mrs. Huyck is a pacesetter in teaching her children about renewable energy and she is already at work developing activities and lessons to enrich the ideas which came with the kit. She is also wonderful about sharing her ideas and lessons with the rest of our staff. We appreciate your support of our school and again, thank you for providing this wonderful teaching opportunity.

Sincerely yours,

Pamela Paddock
